Roxtec Transit Operate™

Digital management system for cable and pipe transits.

Cable and pipe penetrations are crucial for the safety level onboard ships and offshore units as well as in any construction project. Roxtec Transit Operate™ is a digital management system developed to enable complete control, documentation and tracking of all transits through the entire lifecycle of your asset.

The innovative software enables systemized control of the transit installation quality – from the initial installations to the latest upgrades and additions of cables, pipes and equipment. The up-to-date transit activity log makes it easy to see the safety status, and to trace who has opened and closed the transits.

All information in one system

- Drawings
- Certificates
- Pictures
- Product data
- Installation instructions
- Transit activity log

Why Roxtec Transit Operate™?

Take control of your transits

The software presents an overview of all cable and pipe penetrations in a building, ship or offshore unit.

Manage your transits online

You can easily locate each transit onboard, read the activity log and check the safety status.

Access all relevant information

You find all documents and logged activities for each transit in the same place in the software.

### Share digital documentation

You can share the documentation with installers as well as with inspectors from classification societies.

Secure quality over time

You can verify the transit status after any changes and upgrades throughout the lifecycle of the asset.

Comply with class requirements

New international requirements state that it is mandatory for owners and operators of ships and offshore units to maintain a cable transit seal systems register. Roxtec Transit Operate™ makes it easy to meet these new requirements, to establish a digital cable transit seal systems register and to secure quality assurance throughout the lifecycle of an asset.

The Roxtec Software Suite™

Roxtec Transit Operate™ is part of the Roxtec Software Suite™ of interlinked tools including Roxtec Transit Designer™ and Roxtec Transit Build™.
